

November 13, 1919. A few photographs were taken in the garden to show the types of plants grown here.

U<sup>1</sup>-8. Is a mango  $3\frac{1}{2}$  inches long.

U<sup>1</sup>-9. General view. Shows mango at the left, with papaya, roses, carnations, pe-tunias, canna and hisbiscus.

U<sup>1</sup>-10. A general view, mango tree in foreground with hotel in the back.  
Burkea africana at the left.

U<sup>1</sup>-11. A general view of the open forest growth at Victoria Falls, with S.P.I.  
No. 49243, Pseudolachnostylis at the left.

U<sup>1</sup>-12. A view in the park at Victoria Falls hotel. The vegetation here consists largely of the trees of the dry forest type. Combretum is shown in the foreground. There are also *Ochna*, *Pseudolachnostylis*, *Baikaia plurijuga*, *Copaifera*, *Burkea africana*, *Brachistegia randii*, and *Diospyrus*. There are no artificial plantings in this park.

V<sup>1</sup>-1/ Is S.P.I.  
49214, *Ricinodendron rautanenii*, the mungunga or manketti nut, a tree which produces a very light wood, especially suitable for lining leather cases. The fruit is edible and the nut edible and produces an excellent oil.

V<sup>1</sup>-2. Same view as in V<sup>1</sup>-1.

V<sup>1</sup>-3. S.P.I. 49226, Adansonia digitata. About 40 feet high and in full bloom, trunk 6 feet in diameter.

V<sup>1</sup>-4. A detail of the flower and bark of Adansonia digitata. Flower about 4 inches across.

V<sup>1</sup>-5. Another tree of Adansonia digitata, 21 feet in diameter. Another tree is shown at the left in the background.

V<sup>1</sup>-6. Kigelia, or the sausage tree. The large fruits are shown at the left. The flowers are very large and purple, and hang at the end of a stalk, ranging from 1-3 feet in length.

V<sup>1</sup>-7. S.P.I. 49167, Ximenia americana, impinji, natural size. Plum-like fruit with strong Prussic-acid smell, valued chiefly because of the oil of the kernel.
